Evening Brief

Date: Sunday August 11th, 2019

Weather Summary

Warm, dry air returns to the Great Basin this coming week, along with fairly light winds. No critical winds or lightning activity is expected across the Great Basin over the next several days. There could be some lightning holdovers emerging this week as the warmth and dryness builds.

By the end of the week, computer models indicate that a strong, dry cold front could drop down from the Pacific Northwest, bringing increasing SW winds to western Nevada Thursday, spreading eastwards Friday.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

| | | |
|-------------|---|--|
| Great Basin | 3 | Moderate Initial Attack Activity |
| National | 3 | New Fires and Acres: 30 fires 7,562 acres; 2,341 acres large fire growth |

Great Basin Fuels/Fire Potential

Recent showers/wetting rains have significantly increased fuel moisture across the mountains of Central Idaho.

Further south, across the Snake River Plain, northern Nevada, northern Utah, several days of spotty showers and above normal humidity have moderated fuel moisture as well. Existing recent large fires have shown minimal fire activity in these areas this past weekend.

A longer term drying trend is expected this coming week, which will allow fuels to dry again and increase fire potential region wide by the latter part of the week.

Sagebrush live fuel moisture values have dropped to near seasonal normals across much of the geographic area, below 100% in some spots, and will contribute to fire growth at most lower elevations.

Resources:

Aviation within the Great Basin

- 1 VLAT's, 7 LATs, 2 CL-415
- 28 SEATs, 3 Fire Bosses
- 11 Type 1 Helicopters / 11 Committed
- 14 Type 2 Helicopters / 8 Committed
- 23 Type 3 Helicopters

Crews Committed within the Great Basin

- 23 IHCs Committed / 4 Available
- 31 T-2 IAs Committed / 8 Available
